Handbook of Nanophysics: Nanotubes and Nanowires

Handbook of Nanophysics: Nanotubes and Nanowires

Intensive research on fullerenes, nanoparticles, and quantum dots in the 1990s led to interest in nanotubes and nanowires in subsequent years. **Handbook of Nanophysics: Nanotubes and Nanowires** focuses on the fundamental physics and latest applications of these important nanoscale materials and structures. Each peer-reviewed chapter contains a broad-based introduction and enhances understanding of the state-of-the-art scientific content through fundamental equations and illustrations, some in color.

This volume first covers key aspects of carbon nanotubes, including quantum and electron transport, isotope engineering, and fluid flow, before exploring inorganic nanotubes, such as spinel oxide nanotubes, magnetic nanotubes, and self-assembled peptide nanostructures. It then focuses on germanium, gallium nitride, gold, polymer, and organic nanowires and their properties. The book also discusses nanowire arrays, nanorods, atomic wires, monatomic chains, ultrathin gold nanowires, and several nanorings, including superconducting, ferromagnetic, and quantum dot nanorings.

Nanophysics brings together multiple disciplines to determine the structural, electronic, optical, and thermal behavior of nanomaterials; electrical and thermal conductivity; the forces between nanoscale objects; and the transition between classical and quantum behavior. Facilitating communication across many disciplines, this landmark publication encourages scientists with disparate interests to collaborate on interdisciplinary projects and incorporate the theory and methodology of other areas into their work.

From reader reviews:

Clinton Whitten:

Spent a free time and energy to be fun activity to accomplish! A lot of people spent their leisure time with their family, or their own friends. Usually they performing activity like watching television, going to beach, or picnic from the park. They actually doing ditto every week. Do you feel it? Do you need to something different to fill your current free time/ holiday? Can be reading a book can be option to fill your totally free time/ holiday. The first thing that you will ask may be what kinds of e-book that you should read. If you want to consider look for book, may be the e-book untitled Handbook of Nanophysics: Nanotubes and Nanowires can be very good book to read. May be it can be best activity to you.

Christopher Pruett:

This Handbook of Nanophysics: Nanotubes and Nanowires is new way for you who has fascination to look for some information given it relief your hunger associated with. Getting deeper you into it getting knowledge more you know otherwise you who still having tiny amount of digest in reading this Handbook of Nanophysics: Nanotubes and Nanowires can be the light food for you personally because the information inside that book is easy to get simply by anyone. These books produce itself in the form and that is reachable by anyone, sure I mean in the e-book form. People who think that in reserve form make them feel sleepy even dizzy this guide is the answer. So there is no in reading a guide especially this one. You can find what you are looking for. It should be here for you. So , don't miss the idea! Just read this e-book variety for your better life in addition to knowledge.

Robert Clark:

You can get this Handbook of Nanophysics: Nanotubes and Nanowires by visit the bookstore or Mall. Just simply viewing or reviewing it can to be your solve challenge if you get difficulties for the knowledge. Kinds of this guide are various. Not only simply by written or printed but additionally can you enjoy this book by means of e-book. In the modern era just like now, you just looking of your mobile phone and searching what your problem. Right now, choose your ways to get more information about your publication. It is most important to arrange yourself to make your knowledge are still change. Let's try to choose correct ways for you.

Marlene Clabaugh:

Reading a guide make you to get more knowledge from the jawhorse. You can take knowledge and information from your book. Book is created or printed or outlined from each source that filled update of news. On this modern era like currently, many ways to get information are available for you actually. From media social similar to newspaper, magazines, science reserve, encyclopedia, reference book, book and comic. You can add your understanding by that book. Are you ready to spend your spare time to open your book? Or just trying to find the Handbook of Nanophysics: Nanotubes and Nanowires when you desired it?
