**Plant Litter: Decomposition, Humus Formation, Carbon Sequestration** Bjorn Berg, Charles McClaugherty

Since the publication of the 2<sup>nd</sup> edition, there have been substantial developments in the field of litter decomposition. This fully revised and updated 3<sup>rd</sup> edition of *Plant Litter* reflects and discusses new findings and re-evaluates earlier ones in light of recent research and with regard to current areas of investigation.

The availability of several long-term studies allows a more in-depth approach to decomposition patterns and to the later stages of decomposition, as well as to humus formation and accumulation.

The latest information focuses on three fields:

- the effects of manganese on decomposition and possibly on carbon sequestration,
- new findings on decomposition dynamics, and
- the new analytical technique using <sup>13</sup>C-NMR.
