Neurofeminism: Issues at the Intersection of Feminist Theory and Cognitive Science (New Directions in Philosophy and Cognitive Science) Dr Robyn / Jaap Jacobson, Professor Anne / Bluhm

This is the first interdisciplinary collection of essays to address how recent neuroscience affects traditional feminist issues. A distinguished group of philosophers, psychologists, sociomedical scientists, and feminist scholars explore such questions as:

- Do women and men have significantly different brains?
- Do women empathize, while men systematize?
- Is there a distinctive 'feminine' ethics?
- Is the self constituted by brain activities independent of society?
- Should addressing issues about sexuality and intersex conditions lead to changes in methodology?
- What do recent technological advances in the brain sciences teach us about such questions?

Taken together, these essays challenge and expand upon some of the more sensational findings of neuroscience, and suggest new strategies and topics for research.

That's why this book suitable all of you.

Timothy Wrobel:

As a college student exactly feel bored to be able to reading. If their teacher requested them to go to the library or to make summary for some e-book, they are complained. Just minor students that has reading's spirit or real their pastime. They just do what the instructor want, like asked to go to the library. They go to right now there but nothing reading seriously. Any students feel that looking at is not important, boring in addition to can't see colorful photos on there. Yeah, it is to be complicated. Book is very important for you personally. As we know that on this period of time, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. So , this Neurofeminism: Issues at the Intersection of Feminist Theory and Cognitive Science (New Directions in Philosophy and Cognitive Science) can make you feel more interested to read.
