A.D. Alexandrov: Selected Works Part 2 (Classics of Soviet Mathematics) S.S. Kutateladze

A.D. Alexandrov's contribution to the field of intrinsic geometry was original and very influential. This text is a classic that remains unsurpassed in its clarity and scope. It presents his core material, originally published in Russian in 1948, beginning with an outline of the main concepts and then exploring other topics, such as general propositions on an intrinsic metric; angles and curvature; existence of a convex polyhedron with prescribed metric; curves on convex surfaces; and the role of specific curvature. This text provides a definitive source for the development of intrinsic geometry and is indispensable for graduate students who want a better understanding of this subject.
