Constructing Survey Data: An Interactional Approach Giampietro Gobo, Sergio Mauceri

Engaging and informative, this book provides students and researchers with a pragmatic, new perspective on the process of collecting survey data. By proposing a post-positivist, interviewee-centred approach, it improves the quality and impact of survey data by emphasising the interaction between interviewer and interviewee. Extending the conventional methodology with contributions from linguistics, anthropology, cognitive studies and ethnomethodology, Gobo and Mauceri analyse the answering process in structured interviews built around questionnaires.

The following key areas are explored in detail:

- An historical overview of survey research
- The process of preparing the survey and designing data collection
- The methods of detecting bias and improving data quality
- The strategies for combining quantitative and qualitative approaches
- The survey within global and local contexts

Incorporating the work of experts in interpersonal and intercultural relations, this book offers readers an intriguing critical perspective on survey research.
