Remotely Sensed Data Characterization, Classification, and Accuracies (Remote Sensing Handbook)

Prasad S. Thenkabail Ph.D.

A volume in the **Remote Sensing Handbook** series, **Remotely Sensed Data Characterization, Classification, and Accuracies** documents the scientific and methodological advances that have taken place during the last 50 years. The other two volumes in the series are *Land Resources Monitoring, Modeling, and Mapping with Remote Sensing*, and *Remote Sensing of Water Resources, Disasters, and Urban Studies*.

This volume demonstrates the experience, utility, methods, and models used in studying a wide array of **remotely sensed data characterization, classification, and accuracies for terrestrial applications**. Leading experts on global geographic coverage, study areas, and array of satellite and sensors contribute to this unique handbook. This theoretical as well as highly practical book represents a thorough history of advancement in the field over last 50 years, bringing us to where we are now, and highlighting future possibilities.

Highlights include:

- Fundamental and advanced topics in remote-sensing satellites and sensors
- Remote sensing data calibration, normalization, harmonization, and synthesis
- Optical, Radar, LiDAR, thermal, hyperspectral, and other satellite sensors, normalization of remotely sensed data, and data degradations
- Digital image processing, urban image classification, and image classification methods in land use/land cover, cropland, change detection studies
- Enhanced vegetation indices and standardization of vegetation indices
- Object-based image analysis (OBIA) and geospatial data integration
- LiDAR data processing and applications
- Geoprocessing, GIS, and GIScience
- GNSS applications
- Crowdsourcing and cloud computing
- Google Earth for Earth Sciences
- Map accuracies
- Remote-sensing law or space law, and a host of other topics

Considered *magnum opus* on the subject, the three-volume *Remote Sensing Handbook* is edited by Dr. Prasad S. Thenkabail of the United States Geological Survey and a renowned international expert in remote sensing and GIScience, with contributions from the very best leading global experts, the

handbook gives you a knowledge base on the evolution of remote sensing science, current state-of-the-art technology, and a future vision for the field.

From reader reviews:

William Harris:

Book is to be different per grade. Book for children until finally adult are different content. To be sure that book is very important usually. The book Remotely Sensed Data Characterization, Classification, and Accuracies (Remote Sensing Handbook) seemed to be making you to know about other information and of course you can take more information. It is quite advantages for you. The e-book Remotely Sensed Data Characterization, Classification, and Accuracies (Remote Sensing Handbook) is not only giving you far more new information but also being your friend when you really feel bored. You can spend your spend time to read your e-book. Try to make relationship with the book Remotely Sensed Data Characterization, Classification, and Accuracies (Remote Sensing Handbook). You never feel lose out for everything in case you read some books.

Frances Heath:

The reserve with title Remotely Sensed Data Characterization, Classification, and Accuracies (Remote Sensing Handbook) has lot of information that you can learn it. You can get a lot of help after read this book. This particular book exist new information the information that exist in this publication represented the condition of the world currently. That is important to yo7u to know how the improvement of the world. This specific book will bring you throughout new era of the internationalization. You can read the e-book on your own smart phone, so you can read that anywhere you want.

Lorenzo Davis:

In this particular era which is the greater man or who has ability in doing something more are more important than other. Do you want to become considered one of it? It is just simple strategy to have that. What you are related is just spending your time not very much but quite enough to get a look at some books. One of the books in the top checklist in your reading list is Remotely Sensed Data Characterization, Classification, and Accuracies (Remote Sensing Handbook). This book which can be qualified as The Hungry Hills can get you closer in getting precious person. By looking upwards and review this guide you can get many advantages.

Michael Kenney:

Do you like reading a reserve? Confuse to looking for your best book? Or your book was rare? Why so many problem for the book? But just about any people feel that they enjoy intended for reading. Some people likes looking at, not only science book and also novel and Remotely Sensed Data Characterization, Classification, and Accuracies (Remote Sensing Handbook) or others sources were given information for you. After you know how the truly great a book, you feel desire to read more and more. Science guide was created for teacher or perhaps students especially. Those textbooks are helping them to include their knowledge. In additional case, beside science e-book, any other book likes Remotely Sensed Data Characterization, Classification, and Accuracies (Remote Sensing Handbook) to make your spare time considerably more

colorful. Many types of book like this one.
