Aspects of Multilingual Aphasia (Communication Disorders Across Languages) Martin R. Gitterman, Mira Goral

This volume provides a broad overview of current work in aphasia in individuals who speak more than one language. With contributions from many of the leading researchers in the field, the material included, both experimental work and theoretical overviews, should prove useful to both researchers and clinicians. The book should also appeal to a broader audience, including all who have an interest in the study of language disorders in an increasingly multicultural/multilingual world (e.g. students of speech-language pathology and linguistics). The areas of multilingual aphasia addressed in this collection include assessment and treatment, language phenomena (e.g. code-switching), particular language pairs (including a bidialectal study), and the role of cultural context.
